On the identical mesh event, $\mathcal{F}$ preserves total shear while T_{full} reclassifies part of it
Immediately before $\gamma = 0.72$
element mean $= 0.721$
Avalanche step $\gamma = 0.73$
element mean $= 0.731$
Immediately after $\gamma = 0.74$
element mean $= 0.742$
Direct $\mathcal{F}_{12} - \gamma$
Immediately before $\gamma = 0.72$
element mean $= 0.718$
Avalanche step $\gamma = 0.73$
element mean $= 0.495$
Immediately after $\gamma = 0.74$
element mean $= 0.497$
Reconstructed $(T_{\mathrm{full}})_{12} - \gamma$
